

INGRID Cane / Crutch Tip

15 combinations of style and size

The INGRID tips are available in 15 combinations of style and size to fit virtually any walking pole, wooden cane or crutch having a shaft diameter between 8 mm (5/16") and 27 mm (1-1/16").

Manufactured in Sweden, all tips are made of high quality polyurethane, which not only makes them extremely durable, but also provides for an excellent grip both indoors and outdoors.

Safety is enhanced because the tread pattern at the bottom of the tip does not wear as quickly as a conventional tip may. Inside all tips are washers which prevent the cane or crutch from wearing through the tip. In most styles, this washer is made of zink-plated steel; however, the smallest-sized (predominantly used for fitness walking poles) tips washer is made of a heavy-duty plastic.

Each tip is manufactured with three distinct surfaces to accommodate different needs of its users, as follows (also see photo upper left):

Convex: The "tire track" treads, at point of contact, provide an excellent grip on most surfaces. Its convex bottom enhances both walking comfort and durability.

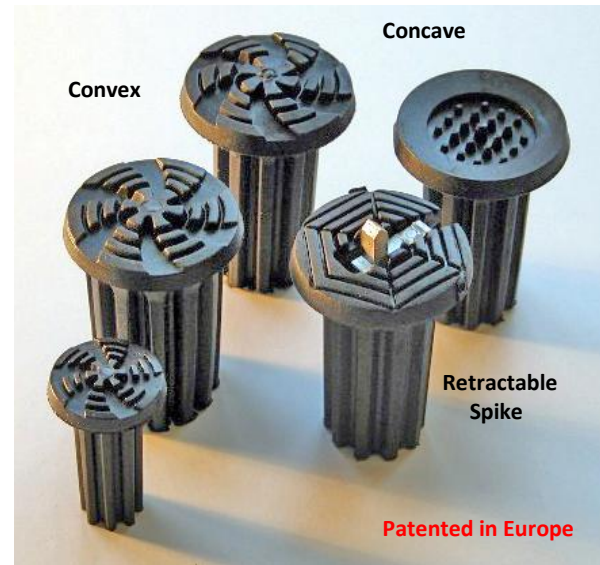

Retractable Spike: The retractable spike provides a firm grip on snow, ice and most other outdoor surfaces. Keep retracted for use during the summer months or while indoors, so as not to damage floors.

Concave: Provides the highest level of support on indoor surfaces.

(Other colors can be special-ordered. See website for examples.)

All tips are offered with either a firm neck (see photo on right), in line with traditional tips, or the patented elastic neck (see photo above) which, thanks to its design, adjusts to the dimension of the cane or crutch shaft, making it easy for the user to replace or substitute tips as needed.

Elastic Neck Tip		Convex	Retractable Spike	Concave
